

Macro Micro™

There are fourteen elements that are essential for plant growth, including Nitrogen, Phosphorus and Potassium, each of which the plant needs in larger quantities.

Some, however, are needed in small quantities, and are referred to as “micronutrients.” This does not diminish their importance, since Zinc, Manganese, Iron, and Magnesium are critical for robust growth and color.

For turf managers, the right balance of micronutrients, provided in a reacted form for ready plant uptake is paramount. **Macro Micro** is the answer.

Macro Micro Provides The Perfect Blend Of Minerals

Enhances Overall Plant Strength

Each micronutrient provides a particular, and important, benefit to plant strength and vitality. For example, Manganese is needed for respiration and nitrogen metabolism, and Zinc plays a role in protein synthesis. Turf quality is enhanced when the plant has ready availability of each of the five micronutrients in Macro Micro.

Enhances The Color & Quality

Formulated specifically for agricultural application, **Macro Micro** provides just the right amount of Iron to positively affect both color and quality.

No Baggage –High Results

Ionic minerals, chelated and complexed to resist soil tie-up, means **Macro Micro** gives you plant-available nutrients with low inputs and low waste.

Usage rate is 1-2 qt. per acre

Macro Micro™

Protecting The Nutrients

All micronutrient minerals carry an ionic charge that needs to be satisfied through complexing chelation to keep the nutrient from becoming tied-up in the soil. AmpAgonomy products feature a unique carbon technology preventing tie-up reactions in the soil.

Because amino acids are utilized in **Macro Micro**, you are assured that the nutrients are easily assimilated by the plants, in a form that enhances plant strength and growth. Many products claim “complexing” and “chelation,” but use synthetic materials to protect the nutrient. In these cases, the plant is forced to expend energy to expel the complexing agent.

Macro Micro is just what your plants need, in just the way the turf needs it.

Macro Micro – Benefits

- ✦ The perfect proportion of four key micronutrients:
 - * Manganese
 - * Iron
 - * Zinc
 - * Magnesium
- ✦ Complexed and chelated minerals resist soil tie-up
- ✦ Amino acids complexing provides additional plant growth benefits
- ✦ Enhances quality and color
- ✦ Clean, easy handling solution
- ✦ Will not corrode application equipment
- ✦ Highly soluble
