

Mega Cal™

Turf managers have long understood the importance of Calcium for plant nutrition, with the standard treatment often being gypsum, lime or Calcium Nitrate. While relatively inexpensive, none of these solutions are readily plant-available, with a vast percentage of application lost in soil tie-up.

Mega Cal contains more than 70 essential nutrients that are plant-available, helping build stronger plants and enhanced soil conditions for optimum uptake.

Highly soluble, **Mega Cal** provides the industry's most cost-effective solution for efficient Calcium nutrition.

Mega Cal –Efficient, Effective & Affordable

Enhanced Turfgrass Quality

The reacted Calcium in **Mega Cal** provides plants with the nutrition critical for strong cell walls. Protected through proprietary technology from soil tie-up, Mega Cal will strengthen turfgrass and other plants.

Enhanced Soil Structure

Proper soil structure (flocculated) is enhanced by Calcium, which has shown to ensure more efficient micro pore spaces –where the roots take up nutrients from water in the soil.

Enhanced Root Growth

Calcium is the material of root growth, and **Mega Cal** provides the most cost-efficient source of reacted Calcium for nutrient uptake in the root zone. **Mega Cal** outperforms most standard solutions in effectiveness and prevention of nutrient loss through tie-up.

Usage rate is 1-3 quarts per acre

Mega Cal™

Calcium is a critical component of strong plant cellular strength. Maintaining strong cell walls is important to ensuring overall plant strength and can have a positive impact on the viability of transportation of harvested crops.

Soil structure is also dramatically enhanced through application of reacted Calcium. **Mega Cal** is unique, containing high levels of nutrients, such as Manganese, Silicon and Sulfur, as well as Carbon.

As nutrients are only taken up through the water within macro and micro pore spaces, **Mega Cal** helps build flocculated soil, increasing drainage and improving a positive growing environment for greater root growth.

Mega Cal - Benefits

- ☞ Enhances overall crop quality
- ☞ Ultra-low input rates
- ☞ Strengthens plant cellular structure
- ☞ Enhances soil structure, creating more efficient pore spaces for nutrient uptake
- ☞ Enhances plant metabolism
- ☞ Safe to mix with all AmpAgronomy products!
- ☞ Clean, easy handling solution
- ☞ Will not corrode application equipment
- ☞ Low impurities
